

ICT Forum Conference 2011

An Integrated Approach to Student Data Management

Emma Potts, Head of Student Administration Julia Palejowska, College Accountant, Brasenose College Ned Ramsay, Systems Manager, Jesus College

14 July 2011

Session outline

- Student Systems Replacement Programme: update
- Brasenose ERM Project
- Expectations vs Reality

Student Systems: current landscape

- Student Systems portfolio:
 - OSS (Oracle Student System)
 - other systems used daily by academics, admin staff, students
- Significant evolution over past few years
- Not primarily 'central admin' systems

OSS Data Feed	Admissions (ADSS/ADMIT, Embark)
OxCORT	Local databases – Depts and Colleges
Graduate Supervision System	Other central admin databases
University Card	WebLearn
CareerConnect	Student Self-Service and Student Gateway
MarkIT	Reporting (internal and external)

Student Systems: the issues

- Removal of OSS support by Oracle in 2013
- Student Systems far behind those of comparator universities
- Constant demand for further systems development (e.g. ADSS, GSS, OxCORT)
- Poor usability, not intuitive
- Inadequate sharing of data with other systems, both central and local

Student Systems: Programme objectives

- Enhanced support for teaching and learning across Oxford
- Enhanced student and staff experience
- Intuitive user interface access to many areas of work
- Reduced time spent on administrative processes
- Reduced duplication of data entry focus on integration
- Reduced development costs
- Rapid development supporting policy and process change
- Effective data management by super-users
- Assured production of statutory reports (e.g. HESA)

Student Systems: meeting the objectives

- Student Systems portfolio core, specialist, local
- Approach
 - Replace core OSS functions
 - Review / replace other systems (e.g. OxCORT, GSS)
 - Ensure effective integration
 - Provide new features
- Preferred bidder: Tribal (SITS Vision)
 - 70% UK HEIs, 43% > 10 years
- Timeframe: 2011-2015
 - September 2012: Degree Ceremonies administration
 - August 2013: Core OSS functions

Proposed implementation approach

Governance and consultation

- Student Systems Programme Board
- Student Systems Management Group
- Workstream implementation groups
- Workstreams consultation across Oxford
- Representation from across Oxford:
 - Academics
 - Students
 - Divisional offices
 - Departments and faculties
 - Colleges and Permanent Private Halls
 - Central services

Implementation Workstreams

DACM - Data Structure and Academic Model

RDAN - Reporting and Data Analysis

PAOM - Pre-application, and Application and Offer Management

ADMG - Academic Data Management

STFF - Student Finance and Funding

EXAA - Examinations, Assessments, and Awards

CMTL - Curriculum Management for Teaching and Learning

TSYS - Technical and Systems

SPTN - Support and Training

The Brasenose ERM Project

- College systems in 2007
 - In-house custom built access student records system
 - In-house accommodation module
 - Poor management information systems and no management accounts
 - Expensive finance system with poor client side reporting and poor support
 - Student billing system very inflexible
 - Poor integration between systems
 - Poor communication between departments within college and understanding of data flow requirements
 - Duplicated data and manual systems
 - Not ready to meet the expectations of the 21st Century paying student.

The ERM Project – Brasenose Timeline

Recognising the student record as the core of a cradle to grave system

- MT 08 College Office implementation of ERM student record system from Business Insights Group
- TT 09 Finance Bursary replacement of Finance System and Student Billing System with i4e (GP)
- 09/10 Domestic Bursary using i4e Accommodation Module
- TT11 Admissions applicants on ERM
- Aug 11 Domestic Bursary implementation of Kinetic Student
- Jul 11 Finance Bursary building of Interfaces with ERM and GP

I4e College Collaboration

- Currently 8 colleges using varying elements of i4e
- GP User Group termly meeting of i4e College Accountants
 - Establised March 2010
 - Operational matters (eg bugs, shared tips, upgrades, new releases..)
 - BIG support
 - Functionality development
 - Shared training opportunities
 - Email group for communication with BIG Customer Service Manager
 - Collaborative commissioning of eg GP-ChSORP template link
 - Collaboration between Academic Administration Offices
- College Accountants v Academic Administration v IT Departments

Central University interest in the collegiate ERM initiative

- Sep 10 ERM user colleges were asked to brief OUCS on the development of the ERM initiative
- Nov 10 some college reps met to formulate shared response re central university support, and identified the following key areas for consideration:
 - Need to standardise treatment of key data
 - Benefits of identification of a model implementation
 - Contribution to the development of replacement for OSS
 - Need for central university to understand data flows between centre and colleges, and use of data WITHIN colleges
 - Potential for cloud hosting
 - Shared ERM consultancy resource to share best practice, support implementation etc

Current Developments

- BIG Customer Service Manager
 - Developing the relationship with the GP User Group as a whole
 - Collaborative commissioning of developments
- ERM 2011 (Version release following CRM2011)
 - Fundamental changes to security and access structure
 - BIG are taking the opportunity to move towards standardisation of key data and field presentation in Oxford 'Standard' version.
 - Customised layer over standard base.
 - (1) Cambridge implementation, (2) new Oxford implementation,
 - (3) Oxford upgrade
 - Reduced dependence on portal access
- Workstream participation
 - College reps to be involved in workstream development of OSS replacement.
 - Key is to extend college involvement BEYOND the College Office

What to change first?

- Common factor was the student record system
- Partial data already being entered for Great Plains
- Access 2000 extended support expired 14/07/2009
- The database had grown organically making it hard to modify
- Additional report functionality was needed
- No PostgreSQL ODBC driver for 64 bit systems (now available)
- Move to recognised "off the shelf" packages for support, development and security

Envisaged Workflow

Admissions Process

- 1) Student application received
 - Undergraduates via Admit
 - Graduates entered directly onto ERM
- 2) Offers/Conditional Offers made
- 3) Import into ERM student system
- 4) ERM auto-populates accommodation database
 - Allowing room allocations/Online Accommodation
- 5) Remove unsuccessful applicants
- 6) Mass update applicants to students
- 7) Import SSO numbers, Bod cards, network logins etc.

Systems Information

- In house Virtual MS SQL and IIS Servers
- Silverlight is required for the meal booking system
- Integration via intermediary tables passing our UID (from ERM) as the primary key (2hour intervals)
- A translation table exists that is accessed via an Access front end allowing accounts staff to update and match cost centres
- All financial imports are manual (by choice)
- A Sharepoint server provides web-form access for students to check their Battels and update emergency contact details

Future

- Increase MiFare integration to meals/laundry/vending machines
- Improve e-payment system for Battels
- Fellows and other members meal booking
- Link electronic locks to room bookings
- Produce workflows involving other college departments
- Increase collaboration between colleges and central admin

Next steps

- High-level programme planning set priorities
 - Product Evaluation Group
 - Student Systems Programme Board
 - Opportunities for input
- Workstream implementation groups
 - Need engagement from across Oxford
 - Ensure effective integration of systems
 - Focus on usability

Questions/discussion

- Details on the website:
 - http://www.admin.ox.ac.uk/ac-div/studentsystems/
