

# WebRTC

Unifying all Communication directly in the Browser?

*ICT Forum Conference, Oxford – 11<sup>th</sup> July 2013*

Ronald Haynes, Cambridge University Computing Service – [rsh27@cam.ac.uk](mailto:rsh27@cam.ac.uk)

# Video-telephony ... the early years? - (1)

*"The Machine," they exclaimed, "feeds us and clothes us and houses us; through it we speak to one another, through it we see one another, in it we have our being. The Machine is the friend of ideas and the enemy of superstition: the Machine is omnipotent, eternal; blessed is the Machine." ... in theory the Machine was still the creation and the implement of man, but in practice all, save a few retrogrades, worshipped it as divine. ... One believer would be chiefly impressed by the blue optic plates, through which he saw other believers; another by the mending apparatus ... another by the lifts, another by the Book. And each would pray to this or to that, and ask it to intercede for him with the Machine as a whole. ... all who did not accept the minimum known as "undenominational Mechanism" lived in danger of Homelessness, which means death, as we know.*

# Video-telephony ... the beginning?

PUNCH'S ALMANACK FOR 1879.

1 December 9, 1878

**EDISON'S TELEPHONOSCOPE (TRANSMITS LIGHT AS WELL AS SOUND).**

*(Every evening, before going to bed, Pater- and Materfamilias sit up on electric camera-obscura over their bedroom mantel-piece, and gladden their eyes with the sight of their Children at the Antipodes, and converse gaily with these through the wires.)*

*Paterfamilias (in Wilton Place). "BEATRICE, COME CLOSER, I WANT TO WHISPER." Benetria (from Ceylon). "YES, PAPA HEAR."  
Paterfamilias. "WHO IS THAT CHARMING YOUNG LADY PLAYING ON CHARLIE'S SIDE?"  
Beatrice. "SHE'S JUST COME OVER FROM ENGLAND, PAPA. I'LL INTRODUCE YOU TO HER AS SOON AS THE GAME'S OVER?"*

Adapted from Punch, 9<sup>th</sup> Dec. 1878 – found on [wikimedia.org](http://wikimedia.org)

# WebRTC – *in action* (... prepared earlier!)

# WebRTC – Web *Real Time Communications!*

- New standard emerging from the W3C (along with HTML5) & IETF
- Support from Google & Mozilla, + Opera, Cisco, AT&T, Plantronics, ...
  - possible in Internet Explorer (*currently with Google Chrome Frame plug-in*)
  - Microsoft part of discussions, but wanted an alternative approach
- Enables live, direct audio & video communications between browsers
  - potential to either unseat or complement Skype and similar
  - or possibly the natural evolution of synchronous communications

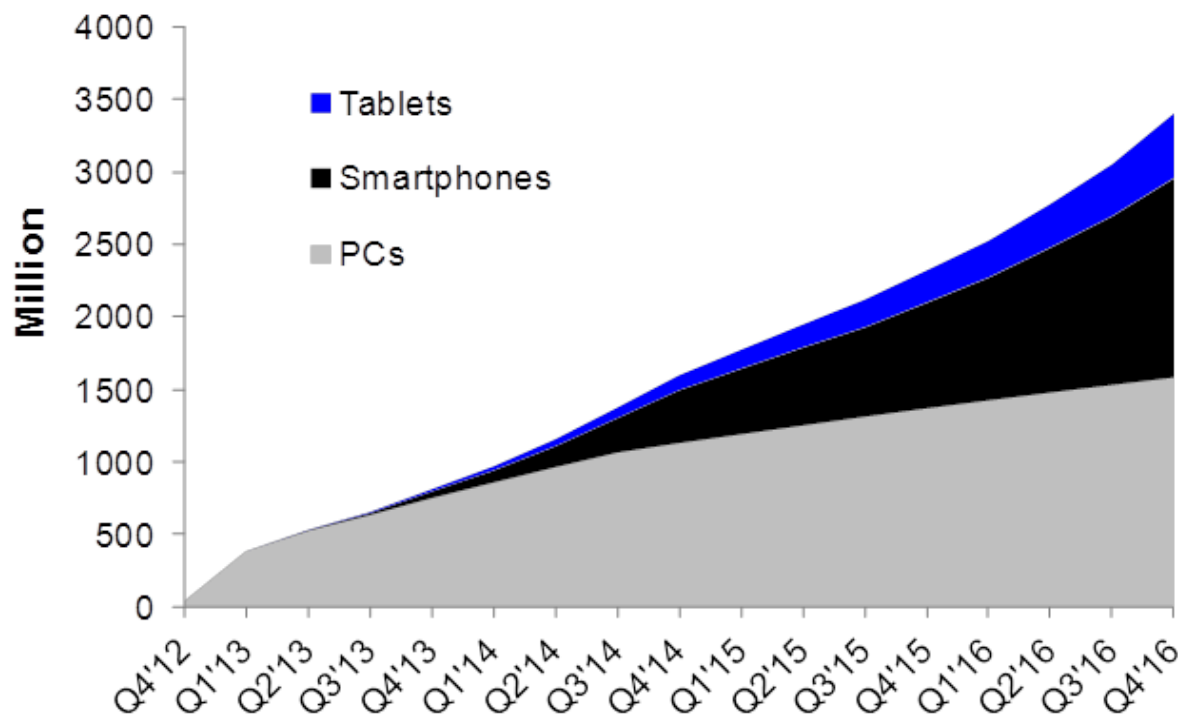

# WebRTC – How it Works

# WebRTC ... *rapid growth projection!*

Figure 1: WebRTC support will grow quickly, led by PCs initially

# WebRTC – overview & operations

- there has been no free, high quality, complete solution enabling communication (audio/video/data) in the browser ... until now
- parts developed by [On2 Technologies](#) (VP8 -> [WebM](#)), [Global IP Solutions](#) (iSAC, iSAC), both acquired by Google (2010, 2011); W3C started work on standard
- support for WebRTC growing everywhere – e.g. [www.webrtcworld.com](http://www.webrtcworld.com)
- framework: HTML5, JavaScript Session Establishment Protocol (JSEP)
- direct connections can be made without hardware in the middle
- P2P, firewall traversal: STUN, ICE, TURN, RTP-over-TCP, proxies
- ... more details at the FAQs – <http://www.webrtc.org/faq>

# Creative approaches to Unified Communications?

Major vendors like Cisco and ShoreTel offer turnkey solutions to provide VoIP telephony plus advanced UC features like videoconferencing, shared whiteboarding, desktop-sharing. But has anybody tried less costly, more modular approaches, bolting together multiple products to provide an integrated experience for users?

For instance, maybe some of you already have a VoIP solution and you've found a way to integrate it with something like Lync, and your users can dial, launch a videoconference or share desktops in a single interface, blissfully unaware of the various software pieces that are providing those capabilities.

Just thinking that with technologies like WebRTC (and who knows what else) on the way, that building UC capabilities in an incremental, modular way may provide more flexibility and cost less than buying an all-in-one solution.
