Questions to consider

How can we **collectively**:

Achieve excellence and efficiencies in IT provision for the Collegiate University?

Move from a state where a large proportion of IT investment is in upgrades, maintenance and support to one where IT is a strategic enabler?

Find the best shared operating model that makes full use of the freedoms and responsibilities of central and divisional and departmental IT?

Increase the benefits of IT investments, and raise the quality and accessibility of University information and data assets?
